STEPS FOR ROUNDING

1. Underline the number in the place you are rounding to. For example, round the following to the hundreds place.

<center>1 <u>4</u> 5 8</center>

2. Circle the "bossy" friend to the right of the underlined number.

<center>1 <u>4</u> ⑤ 8</center>

3. If the "bossy" friend is a:

   0, 1, 2, 3, 4– the underlined number stays the same

   5, 6, 7, 8, 9– the underlined number goes up one.

4. All of the numbers before the underlined number stay the same. The "bossy" friend turns into a zero and so do all the numbers after it.

So...1458 rounded to the nearest hundred is 1500.
